INTERVENTIONAL CARDIOLOGY FELLOWS

HANDS-ON CORONARY AHERECTOMY TRAINING

NOVEMBER 1-2, 2018
UNIVERSITY OF WASHINGTON, SEATTLE

LEARN

Gain knowledge about current clinical data, patient selection, and best practices for using laser, rotational, and orbital atherectomy through didactic and case based learning

LIVE

Directly observe live cases and learn best practices and coronary atherectomy techniques from experienced operators

HANDS-ON

Perform real atherectomy in human cadaver arteries to feel and compare the devices head to head. Learn how to set up and troubleshoot the equipment and how to manage complications

Lodging and travel will be paid for by the University of Washington Foundation. To apply, please send your CV and a fellowship director letter confirming you are currently enrolled in an interventional cardiology fellowship program to shelbyk3@cardiology.washington.edu
HANDS-ON CORONARY ATERECTOMY TRAINING

WHY ANOTHER PROGRAM?

There are many lecture-based courses to convey concepts, but few programs that teach real hands-on technical skills. While atherectomy is a challenging technical procedure, fellows do not always have the opportunity to use many atherectomy devices as first operator. Participants will have the opportunity to perform real atherectomy from start to finish using our cadaver models.

WHO WE ARE

At the University of Washington Center for Cardiovascular Innovations, we have developed coronary and structural heart models using human cadavers for teaching and research. We use these models to teach procedural techniques to fellows and physicians, as well as for designing and planning first-in-man procedures. Several industry partners use our models to test novel devices and technologies.

Through several educational grants, we have been able to develop this program, which will provide airfare and one night’s lodging for selected fellows.

AGENDA

Thursday, November 1: Dinner, Cases and Didactics
Friday, November 2: Hands-on Laser, Rotational, and Orbital atherectomy training. Live cases, Complication management: hands-on and case review

HOW TO APPLY

A limited number of fellows will be sponsored to attend the program, so please apply soon. Send your CV and a fellowship director letter confirming you are currently enrolled in an interventional cardiology fellowship program to: shelbyk3@cardiology.washington.edu.
